GASTURBINES: INVESTIGATIONS OF AXIAL FLOW

Order from SLA \$1.60

Trans. of MTZ: Motorische Zeitschrift (West  
Germany) 1962, v. 23, p. 177-183.

DESCRIPTORS: \*Gas turbines, \*Axial-flow turbines,  
\*Turbojet engines, \*Turbine blades, Design, Fluid  
flow, Mathematical analysis.

A new vortex distribution for axial flow turbines was  
described in the theoretical part of this report. It was  
pointed out that there aren't any losses at the design  
point due to false flow direction, even by using un-  
twisted turbine blades, because of constant relative flow  
direction over the whole height of the blades.

DESCRIPTORS: \*Proteins, \*Flour, Air, Separation.

A process is described how protein displacements can  
be obtained in flour by air sifting. The flours are split  
into a protein-rich fraction and another, containing  
little protein. By varying the sifter adjustment, flour  
with a desired protein content can be obtained within  
certain limits. It is advisable to employ impact granulation  
before air sifting in order to have more free protein  
available for the desired protein displacements. (Author)
